

In the claims:

Claims 1-33 cancelled.

34. (new) An electrical device for attachment to a holder in a vehicle, wherein the electrical device (1) is attached to the holder (2) in a first connection by means of at least one hook (41, 42), wherein the electrical device (1) can pivot in relation to the holder (2) because the at least one hook (41, 42) can pivot in relation to the holder (2, 71, 72), and wherein the electrical device (1) can be locked to the holder (2) in a second connection (36, 50), wherein the at least one hook (41, 42) is provided on the electrical device (1, 31), wherein a receptacle (71, 72, 81) for the at least one hook (41, 42) is embodied on the holder (2), wherein a pin (81) is provided on the receptacle (71, 72), wherein a hole (43, 44) for accommodating the pin (81) is provided in the hook (41, 42), and wherein the pin (81) secures the hook (41, 42) in the receptacle (71, 72).

35. (new) The electrical device according to claim 34, wherein a top (31) of the electrical device (1) can be attached to an underside (70) of the holder (2).

36. (new) The electrical device according to claim 34, wherein the electrical device (1) can be locked to the holder (2) by means of a pivoting catch (36).

37. (new) The electrical device according to claim 36, wherein the catch (36) engages an edge (50) of the holder (2).

38. (new) The electrical device according to claim 34, wherein the pivoting catch (36) is disposed on a pivoting ratchet (35).

39. (new) The electrical device according to claim 34, wherein the electrical device is provided with a detent mechanism that automatically engages with the holder (2) in detent fashion when the electrical device is pivoted against the holder.

40. (new) The electrical device according to claim 34, wherein the locking (35, 36, 50) of the electrical device to the holder (2) is secured by means of a lock (6, 37).

41. (previously new) The electrical device according to claim 34, wherein the electrical device (1) has at least one housing (30) and an electrical component (9), that the electrical component (9) is fastened inside the housing (30), and that the at least one hook (41, 42) is provided on the housing (30).

42. (new) The electrical device according to claim 34, wherein the housing (30) of the electrical device (1) is at least partially covered with a protective layer (47) made of a plastic material.

43. (new) The electrical device according to claim 34, wherein a plug connection (40) is provided on a side of the electrical device (1) oriented toward the holder (2).

44. (new) The electrical device according to claim 34, wherein the electrical device (1) has at least one display unit (9), preferably a cathode ray tube display.

45. (new) The electrical device as defined in claim 38, wherein the pivoting catch (36) is pivotably provided on the electrical device.

46. (new) The electrical device as defined in claim 44, wherein the at least one display unit (9) in a cathode ray tube display.

47. (new) The electrical device as defined in claim 38, wherein the pivoting ratchet (35) is securable by means of lock (37).

48. (new) An electrical device for attachment to a holder in a vehicle, wherein the electrical device (1) is attached to the holder (2) in a first connection

by means of at least one hook (41, 42), wherein the electrical device (1) can pivot in relation to the holder (2) because the at least one hook (41, 42) can pivot in relation to the holder (2, 71, 72), wherein the electrical device (1) can be locked to the holder (2) in a second connection (36, 50), wherein the electrical device (1) has at least one display unit (9), wherein the at least one display unit (9) is a cathode ray tube display.

49. (new) The electrical device according to claim 48, wherein the at least one hook (41, 42) is provided on the electrical device (1, 31) and that a receptacle (71, 72, 81) for the at least one hook (41, 42) is embodied on the holder (2).

50. (new) The electrical device according to claim 49, wherein a pin (81) is provided on the receptacle (71, 72), that a hole (43, 44) for accommodating the pin (81) is provided in the hook (41, 42), and that the pin (81) secures the hook (41, 42) in the receptacle (71, 72).

51. (new) The electrical device according to claim 48, wherein a top (31) of the electrical device (1) can be attached to an underside (70) of the holder (2).

52. (new) The electrical device according to claim 48, wherein the electrical device (1) can be locked to the holder (2) by means of a pivoting catch (36).

53. (new) The electrical device according to claim 52, wherein the catch (36) engages an edge (50) of the holder (2).

54. (new) The electrical device according to claim 48, wherein the pivoting catch (36) is disposed on a pivoting ratchet (35).

55. (new) The electrical device according to claim 48, wherein the electrical device is provided with a detent mechanism that automatically engages with the holder (2) in detent fashion when the electrical device is pivoted against the holder.

56. (new) The electrical device according to claim 48, wherein the locking (35, 36, 50) of the electrical device to the holder (2) is secured by means of a lock (6, 37).

57. (new) The electrical device according to claim 48, wherein the electrical device (1) has at least one housing (30) and an electrical component (9), that the electrical component (9) is fastened inside the housing (30), and that the at least one hook (41, 42) is provided on the housing (30).

58. (new) The electrical device according to claim 48, wherein the housing (30) of the electrical device (1) is at least partially covered with a protective layer (47) made of a plastic material.

59. (new) The electrical device according to claim 48, wherein a plug connection (40) is provided on a side of the electrical device (1) oriented toward the holder (2).

60. (new) The electrical device as defined in claim 54, wherein the pivoting catch (36) is pivotably provided on the electrical device.

61. (new) The electrical device as defined in claim 54, wherein the pivoting ratchet (35) is securable by means of lock (37).

62. (new) An electrical device for attachment to a holder in a vehicle, wherein the electrical device (1) is attached to the holder (2) in a first connection by means of at least one hook (41, 42), wherein the electrical device (1) can pivot in relation to the holder (2) because the at least one hook (41, 42) can pivot in relation to the holder (2, 71, 72), and wherein the electrical device (1) can be locked to the holder (2) in a second connection (36, 50), wherein the electrical device (1) can be locked to the holder (2) by means of a pivoting catch (36), wherein the pivoting catch (36) is disposed on a pivoting ratchet (35), wherein the

electrical device is provided with a detent mechanism that automatically engages with the holder (2) in detent fashion when the electrical device is pivoted against the holder, wherein the pivoting ratchet (35) is prevented from moving by means of a securing catch (61), and wherein an axle (62) of the securing catch (61) is connected to a closing cylinder of a lock (37).
